## CONSTANTS AND CONVERSION FACTORS

Universal gravitational constant,

$$G = 6.67 \times 10^{-11} \,\text{m}^3/(\text{kg} \cdot \text{s}^2) = 6.67 \times 10^{-11} \,\text{N} \cdot \text{m}^2/\text{kg}^2$$
  
1 atmosphere of pressure,

1 atm =  $1.0 \times 10^5$  N/m<sup>2</sup> =  $1.0 \times 10^5$  Pa

Magnitude of the acceleration due to gravity at Earth's surface,  $g = 9.8 \text{ m/s}^2$ Magnitude of the gravitational field strength at Earth's surface, g = 9.8 N/kg

The following conventions are used in this exam:

- The frame of reference of any problem is assumed to be inertial unless otherwise stated.
- Air resistance is assumed to be negligible unless otherwise stated.
- Springs and strings are assumed to be ideal unless otherwise stated.
- Fluids are assumed to be ideal, and pipes are assumed to be completely filled by fluid, unless otherwise stated.
